

Amendments to the Claims:

Please amend claim 19 as shown in the following listing of claims. This listing of claims will replace all prior versions, and listings, of claims in the application.

- 1 1. (canceled).
- 1 2. (previously presented) A terminal as claimed in claim 19, wherein the
2 antenna feed is coupled to the ground conductor via a capacitor.
- 1 3. (previously presented) A terminal as claimed in claim 2, wherein the
2 capacitor is a parallel plate capacitor formed by the completely flat conducting
3 plate and a portion of the ground conductor.
- 1 4. (previously presented) A terminal as claimed in claim 19, wherein the
2 antenna feed is coupled to the ground conductor by capacitance between an
3 inductive element and the ground conductor.
- 1 5. (previously presented) A terminal as claimed in claim 19, wherein a slot is
2 provided in the ground conductor.
- 1 6. (previously presented) A terminal as claimed in claim 5, wherein the slot is
2 parallel to the major axis of the terminal.
- 1 7. (previously presented) A terminal as claimed in claim 19, wherein the
2 ground conductor is a handset case.
- 1 8. (previously presented) A terminal as claimed in claim 19, wherein the
2 ground conductor is a printed circuit board ground plane.
- 1 9. (previously presented) A terminal as claimed in claim 19, wherein a
2 matching network is provided between the transceiver and the antenna feed.

1 10. (canceled).

1 11. (canceled).

1 12. (canceled).

1 13. (canceled).

1 14. (canceled).

1 15. (canceled).

1 16. (canceled).

1 17. (canceled).

1 18. (canceled).

1 19. (currently amended) A wireless terminal comprising a ground conductor
2 and a transceiver coupled to an antenna feed, wherein the antenna feed is
3 capacitively coupled to the ground conductor by means of a completely flat
4 conducting plate separate from and opposed to a portion of the ground conductor,
5 the conducting plate being exclusively connected to a support that is at least
6 partially located between the conducting plate and the ground conductor that form
7 a capacitor, the conducting plate of the capacitor being fed via the support, the
8 support being electrically insulated from the ground conductor.

1 20. (previously presented) A terminal as claimed in claim 19, wherein the
2 conducting plate is positioned relative to the ground conductor such that a major
3 surface of the ground conductor is perpendicular to a major surface of the
4 conducting plate.

1 21. (previously presented) A terminal as claimed in claim 20, wherein the
2 ground conductor includes a slot that extends along the length of the ground
3 conductor and is perpendicular to the major surface of the conducting plate.
